

tLinks

A module of tevixAccuPAS that **seamlessly integrates** your validated patient data into your information system **without 3rd party involvement**.

Keep your information systems up to date with verified patient information.

With just a click, keep errors out of your in-house systems and move scrubbed, validated data into your database.

- Keep errors out of your other information systems
- Keep your information systems up to date
- No HL7 interface required – but HL7 update is available

tLinks offers 4 types of integration based on your information system needs:

Seamlessly integrates your validated patient data into your information system without 3rd party involvement.

Embeds tevixMD's features and unmatched validation accuracy directly into your order entry system as a seamless pop-up.

Available with tBulk, our HL7 output can take your team to the next level. Providing a solution for your bulk data to update your HL7 content.

Update target system patient information from tevixAccuPAS or tBulk
